### PUT LONG LOADS IN THEIR PLACE, INDOORS AND OUT, WITH THE 4D

### MULTILOADER

**BOLTON, Canada**

**Thursday, 29 April 2004**

Omega Lift Manufacturing Inc., a North American designer and manufacturer of innovative all terrain forklifts ([www.omegalift.net](http://www.omegalift.net)), has recently launched its most versatile, space-saving, heavy duty forklift to date: the 4D MultiLoader.

The Omega Lift 4D MultiLoader is a four-way all-wheel drive, all-wheel steer, all-wheel brake forklift that performs the jobs of a four-way reach truck, a regular forklift and a sideloader. In addition to handling pallets, with the Omega Lift 4D MultiLoader, long loads can be negotiated through constricted aisles and narrow doorways with ease, resulting in increased storage space and merchandise display areas.

Tools: Roll over icons for explanation

The Omega Lift 4D MultiLoader Series comes in capacities of 8,000/ 10,000/ and 12,000 pounds, with a Perkins diesel, GM gas, or GM LPG engine. Many mast types are available and load bed sizes range from 36 to 60 inches. Generous super elastic tires are standard equipment on this indoor/outdoor multi-functional forklift.

Engineered to ASME standards for tough 24/7 duty, outfitted with North American components, easy maintenance access and a comfortable operator's work station, the Omega Lift 4D MultiLoader is sure to find its way on to every operator's "most wanted list". Should it be required, excellent US/Canada-based after market support is also available.
